**Plastica**

### Points to bear in mind common to all Plastica Solar Covers

- Covers are despatched in reusable drawstring reinforced storage bags except when ordered in special packaging.
- Covers can be ordered in imperial measurements but will be invoiced to the nearest m<sup>2</sup>.
- When calculating cover prices use the exact size in feet or metres for pool dimensions then round off to the nearest square metre. If you have the area in square feet, this can be converted to square metres by multiplying the square footage by 0.0929.
- All covers come complete with a Solar Protector Sheet which **MUST** be used when the cover is not in place on the pool.
- All non hemmed covers are supplied as a rectangle and are to be trimmed on site using a good pair of household scissors as per instructions enclosed.
- Strap sets are supplied automatically with reel systems but not with covers.
- All pro-rata warranties are for covers used on domestic pools run at 30°C (85°F) or below, with chemical and dissolved solid levels kept in accordance with S.P.A.T.A. standards (U.K. Only). Copy of warranty available on request.
- It is recommended that all covers over 12m (40') are fitted with reinforcing and a leading edge when used with a reel system.
- For ease of handling we strongly recommend the use of a Plastica Reel Easy System along with a domestic leading edge.
