

Pool-Smart

Installation Instructions & Operating Manual

**WARNING: THIS CONTROL DEVICE MUST BE INSTALLED
BY A QUALIFIED ELECTRICIAN**

Incorrect Installation Will Affect Your Warranty

Do Not Discard, Keep For Future Reference

QUICK SET-UP GUIDE

Screw mount the Pool-Smart to a wall in a dry weather proof location, ensuring that it is sited no more than 3 metres from the swimming pool filtration pipe work and upstream i.e. before the heating appliance.

Solvent cement the PVC T-Piece into the pipe work ensuring the direction arrow (moulded into the T-Piece) is pointing in the direction of flow.

Electrical connection: -

To access the internal terminal connection block

Remove the 4 cover screws in the lower section of the controller housing & connect as follows:

Terminal 1 and 2 Power supply 100-230 volt ac mains

Terminal 3 and 4 connect to the filtration pump / contactor controlling the filtration pump **(volt free switched output 2-Amp MAX)**

Terminal 5 and 6 connect to the heating appliance (volt free switched output)

Terminal 7 and 8 connect to the flow switch in the T-Piece

Terminal 9 and 10 connect to the temperature sensor in the T-Piece

For programming and functionality refer to the digital controller key section

FULL INSTALLATION INSTRUCTIONS

POSITIONING

The Pool-Smart should be installed in a dry weather proof location that will allow access to the control buttons. Consideration must be given to the positioning of the T-Piece to ensure both the controller and T-Piece are no more than 3 metres apart.

The T-Piece incorporates a flow switch and temperature sensor and must be sited up stream, i.e. before, the pool heating appliance.

WALL MOUNTING

The rear face of the Pool-Smart has an upper key hole screw hook, located at the rear of the enclosure, and 2 lower screw holes which are accessed after removing the 4 screws retaining the lower access cover.

T-PIECE INSTALLATION

The T-Piece should be cut into the swimming pool filtration pipe work up stream (i.e. before) the heating appliance using a suitable PVC cement. The T-Piece has slip fit female 63-mm and is supplied with 50-mm reducers for metric countries or 1½" reducers for imperial countries.

Note:- correct orientation of the T-Piece is essential in order to facilitate the correct operation of the flow switch, and temperature detecting probe i.e. the arrow moulded into the T-Piece must point in the direction of flow.

ELECTRICAL CONNECTION

Terminals 1 and 2: Connect to a permanent power supply of 100-230 volts AC (Mains) fused at 3-Amp.

Terminals 3 and 4: Connect to the filtration pump; i.e. route the live from the supply to the pump through position 3 and 4. **WARNING:** If a circulation pump draws more than 2-Amp an auxiliary contactor **must** be installed to switch the pump.

Terminals 5 and 6: Connect to the heating device - **under no circumstances** should terminals 5 and 6 be connected to a load greater than 2-Amp.

Recommended connection method.

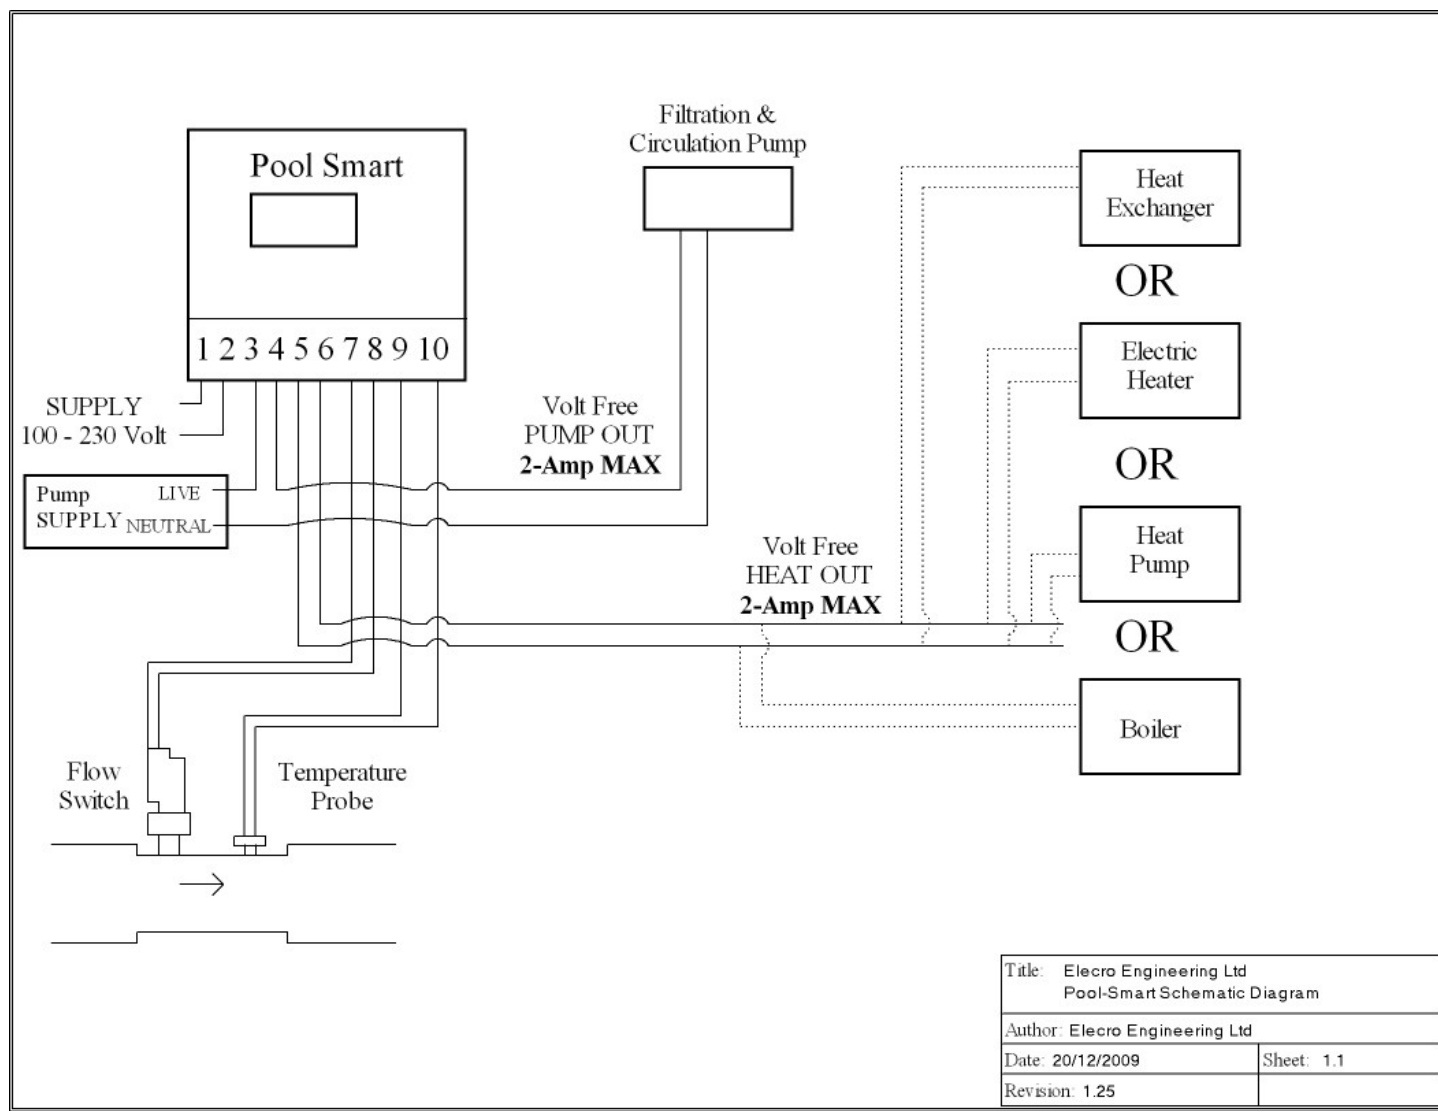

Using a suitable 2 core wire connect the 2 cores from one end of the wire to terminals 5 and 6. Then connect the free end of the wire to the heating appliance by disconnecting one of the connections from the thermostat of the heating device, and re connecting (join) it to one of the cores of the 2 core wire. The remaining free core of the 2 core wire should then be connected to the terminal on the heating device's thermostat.

Terminals 7 and 8 , connect to the flow switch installed in the T-Piece.

Terminals 9 and 10 connect to the temperature-detecting probe installed in the T-Piece.

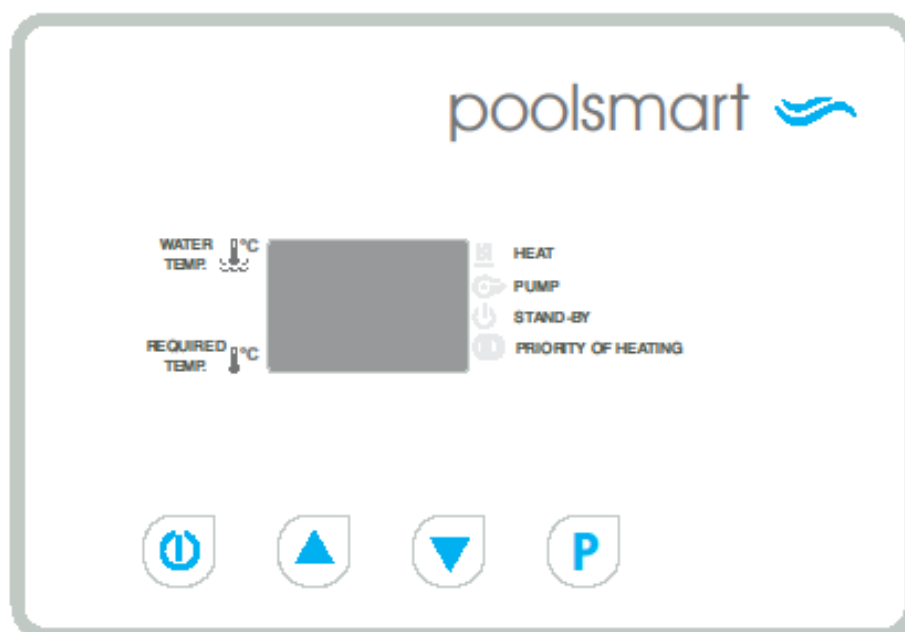

FLOW REQUIREMENTS

The flow switch fitted in the T-Piece requires a minimum flow rate of 4,000 Litres-per-hour.

POOL-SMART DIGITAL CONTROLLER KEY

The Elecro Pool-Smart has been pre-programmed with all the necessary parameters to ensure reliable service & operation. Below is a key explaining the controllers buttons & LED signals.

Press and hold for 2 seconds to power the control on / off.

Press to increase required pool temperature.

Press to decrease required pool temperature.

Press and release to activate / deactivate 'Priority of Heating'

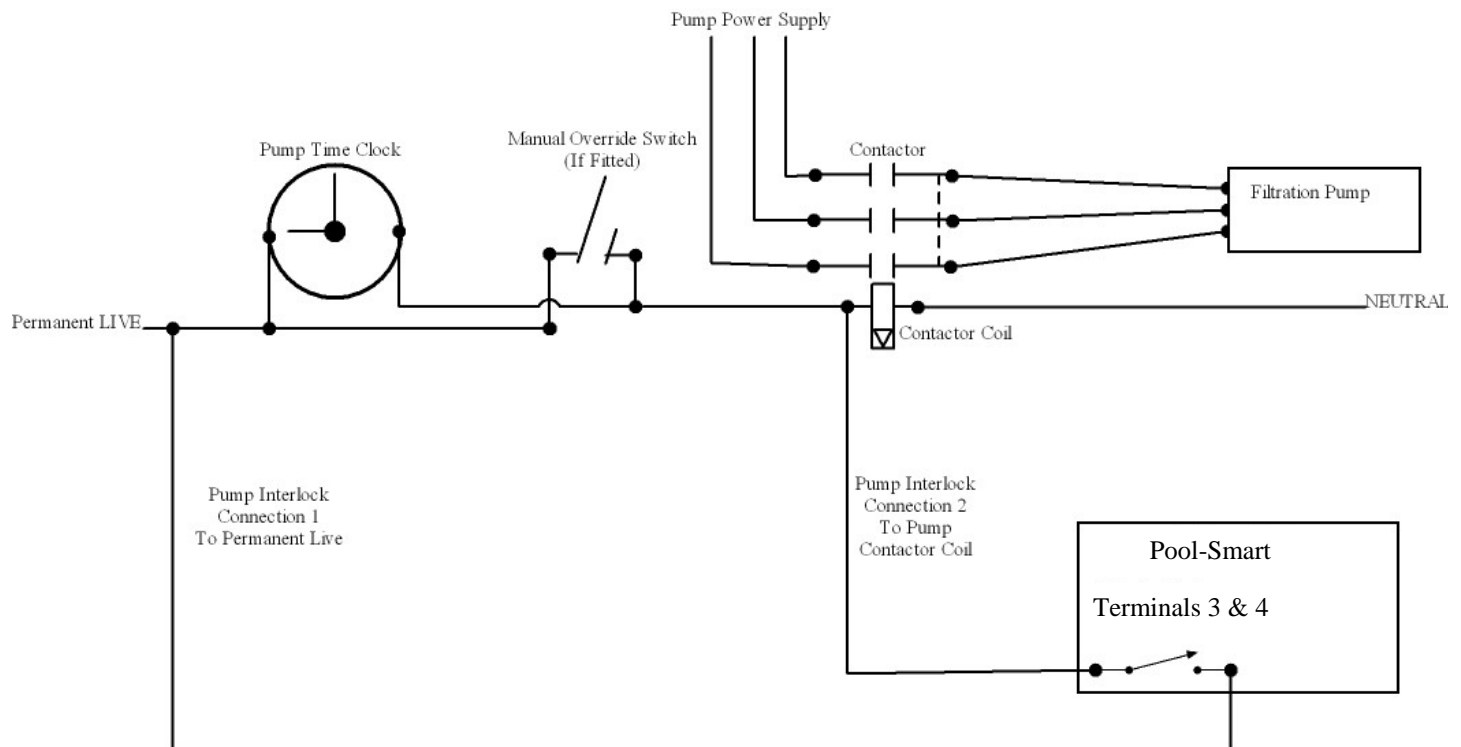

The actual pool temperature is displayed in the red upper display. The lower green display 'required temperature' can be selected by the user. This is the temperature you would like your pool water to be maintained at.

Priority of Heating is a function that ensures the pool water is constantly maintained at the required temperature. When Priority heating is activated the Priority Heating Icon on the bottom right of the display will illuminate. The control will now monitor the pool temperature, and start both the pool circulation pump and heating process when necessary.

CIRCULATION PUMP INTERLOCK

The Pool-Smart can also control the circulation pump by switching the circulation pump on & off whenever the Pool-Smart is in Priority of Heating mode. To connect the pump to the Pool-Smart you will need to connect to terminals numbered 3 & 4 within the Pool-Smart.

NOTE: Any pump that draws more than 2-Amp **Must** be connected via an external contactor. An example of how to connect via an external contactor is given below:

TIME SWITCHING DELAY

To prevent overheating of the switch components within your heating device caused by frequent on and off switching (cycling), the Pool-Smart digital controller has been pre-programmed with a time delay function. This prevents rapid fluctuations in temperature or flow volume from switching the heating device on and off more than once in a two minute period.

The time delay mode is indicated by the flashing LED next to the word HEAT on the digital display. (See diagram on following page).

DIFFERENTIAL

When the pool water has reached the required temperature the Pool-Smart will switch off the heating device and it will not allow the heating device to switch back on until the water temperature has dropped 0.6°C. This value is known as the differential and is also in place to prevent overheating of the switch components caused by cycling.

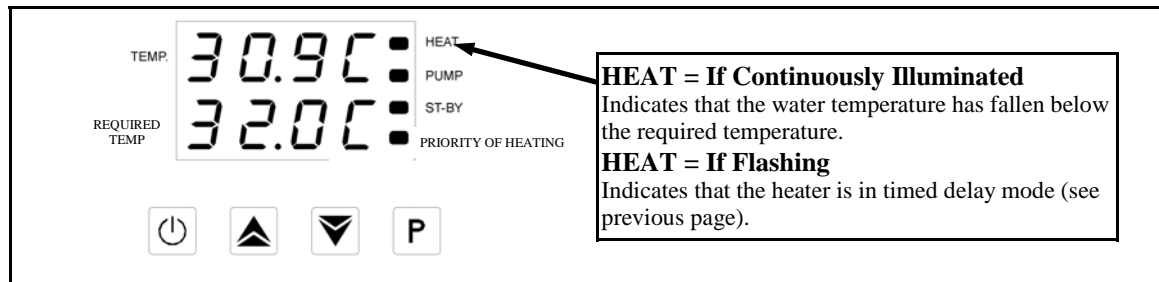

TROUBLE SHOOTING

Heating device will not switch to HEATER ON mode

In most cases this will be the result of one of the following not being met.

Possible Cause 1.) The required temperature has been achieved.

To confirm that the Pool-Smart is requesting the heating device to heat check that the window next to the word HEAT is illuminated (see diagram below). If illuminated go to step 2, if not illuminated increase the required temperature to a value higher than the current water temperature. Confirm whether the heating device now switches on

Possible Cause 2.) Insufficient Flow.

The display will display a NoFL alarm message in the upper (red) display window when the Pool-Smart has detected that the flow rate has dropped below 4,000-litres per hour or has stopped completely.

Useful advice: To reduce running costs and speed up the heating process ;

Insulate the pool wherever possible. A floating solar cover is an essential minimum to retain heat.

WASTE OF ELECTRICAL / ELECTRONIC EQUIPMENT

This product complies with EU directive 2002/96/EC

Do Not dispose of this product as unsorted municipal waste.

This symbol on the product or on it's packaging indicates that this product should not be treated as household waste. Instead it should be handed over to the applicable collection point for the recycling of electrical and electronic equipment.

By ensuring this product is disposed of correctly you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. The recycling of materials will help to conserve natural resources. For more information please contact your local Civic office, your household waste disposal service or the retailer where you purchased the product.

RoHS COMPLIANCE STATEMENT

Elecro Engineering Limited certify that our Electric Swimming Pool Heater Range complies in accordance with RoHS Directive 2002/95/EC on the restriction of hazardous substances.

GUARANTEE

Your Pool-Smart is guaranteed for 1 year from the date of purchase against faulty workmanship and materials.

The manufacturer will replace or repair, at its discretion, any faulty units or components returned to the company for inspection. Proof of purchase may be required.

The manufacturer will not be liable in cases of incorrect installation of the controller, or inappropriate use, or neglect of the controller.

CE Declaration Of Conformity

The manufacturer declares that the herewith products or ranges

POOL SMART DIGITAL CONTROLLER RANGE

Are in conformity with the provisions:

of the ELECTROMAGNETIC COMPATIBILITY directive 89/336/EEC, as amended 93/068/EEC. Controlled by AEMC Measures laboratory—technical report no P96045T

The harmonised standards have been applied: EN 55014—EN 55104

EN 55011
