

Maxi-Floc Plus

1 Litre treats up to 50,000 litres of water

What is it?

Lo-Chlor Maxi-Floc Plus is a heavy duty, fast acting liquid flocculant.

Who needs it?

- A pool owner who has an extremely cloudy pool. If they are unable to see the bottom step of the pool then this is what they need.
- It is the ideal product for the customer who comes into your shop in the morning and wants the pool flocced by lunch-time.

What does it do?

- Maxi-Floc Plus will restore clarity to even the cloudiest pool water.
- Maxi-Floc Plus will floc most pools in under 6 hours.
- Maxi-Floc Plus may also be used to remove dead algae and other floating particles.

What advantages does it have over other similar products?

- Maxi-Floc Plus is the fastest working floc available.
- It is extremely heavy duty.
- It is easy to use and economical to purchase.
- After use, it leaves no messy residue in the pool.
- It may be used in all types of pool finishes.
- Compatible with all recognised sanitisers and other pool additives.

Professional tips:

- Make sure that the pH is high (around 7.8) before adding the product. Alum flocculants only work when there is a high pH.
- If a customer does not bring in a water sample, and you can therefore not check the pH, we suggest that you recommend that they add buffer to their pool to ensure the efficiency of the product.
- Do not run Maxi-Floc Plus through the pool filtration system. Use the re-circulate setting where available. Otherwise, remove the filter grids prior to application.
- Ensure that a sufficient dosage rate is recommended as a lesser amount can result in minimal floccing activity.
- When using Maxi-Floc Plus in water containing high concentrations of positively charged ions (salt pools) be aware that the overall floc size is reduced. This will result in a floc of lighter appearance and intensity than may have been anticipated. Sometimes when floccing salt water pools you may require a second treatment or a double dose.
