Chlorine-free
Complete
pool care with
active oxygen

Y BAYROL
Make your pool a simple pleasure

Swimming Pool Water Care With Active Oxygen Completely in Line with the Trend

More and more swimming pool owners are deciding on gentle care programmes. By far the most popular alternative to chlorine is swimming pool care using active oxygen. At the beginning of the eighties, BAYROL developed an advanced invention which has revolutionised swimming pool care, and since then it has brought ever greater pleasure and health to swimming pool owners across Europe. Advantages include:

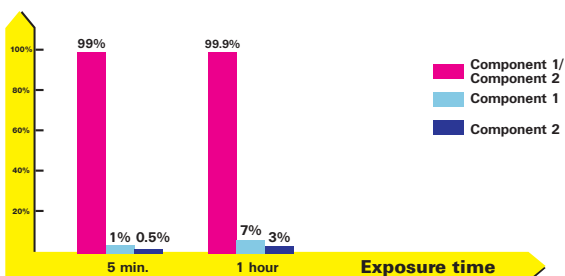

- ▶ The water quality is noticeably agreeable. You bathe as in natural water
- ▶ No smell of chlorine
- ▶ Particularly kind to the skin
- ▶ No irritation of the skin and eyes
- ▶ The skin is not dried out, nor is the hair brittle after swimming
- ▶ Free of heavy metal, ie there is no risk that stains will form as a result of the product itself.

All BAYROL active-oxygen systems are based on the combination of two active components which complement one another ideally:

- ▶ **Component 1** for disinfection of the swimming pool water and for oxidation of contaminants present
- ▶ **Component 2** for preventing algae as well as for supporting and activating Component 1

Germicide of "e. coli" at pH 7.0

killrate (%)

The components make for a unique synergistic sanitizer system (protected by patent rights). Because the individual components interact for maximum effectiveness they must always be used together. In its overall effect, this care programme virtually corresponds to disinfection by chlorine.

New Soft & Easy is really soft and easy!

Soft & Easy is a top-class innovation from BAYROL. Soft & Easy is a completely new intelligent care concept, based on active oxygen, which have benefits over traditional sanitizer methods. It makes sure of naturally super-clear water, it is perceptibly gentle to the skin, eyes and hair, and completely simple to handle. Soft & Easy is a granulate in a double bag. One double bag is sufficient for up to 20 m³ of pool water which means that it is also ideal for the smaller swimming pool. The larger chamber contains active oxygen: the smaller chamber contains active substances for preventing algae, providing a clarifier effect and for pH buffering. Soft & Easy is chlorine-free but is compatible with chlorine - ie a shock chlorination can be performed at any time or temporarily, whilst chlorine can be used during longer absences (such as holidays). Soft & Easy is more intelligent than conventional oxygen products, and therefore offers a series of advantages.

Advantage No. 1: complete care

Soft & Easy is the complete swimming pool care in granulate form. It contains all active ingredients for reliable disinfection, algae prevention and clarifier effect. The algae prevention is of course foam-free. New: the clarifier agent with Soft & Easy is within the product and it takes care of super-clear water and supports the disinfection capacity of the active ingredients. This means that you effectively have a 3 in 1 product.

Advantage No. 2: simple and convenient

The pre-proportioned double bag ensures that things are made simple for you. After adjusting the pH value, you only need to cut open the double bag and put it directly into the pool. Finished! Soft & Easy is dissolved rapidly and immediately releases active oxygen, disinfects the water and ensures effective prevention of algae, and a visible "clear water" effect. Problems with complicated estimates or measurements of dosing quantities belong to the past, and the metering float to dose tablets is no longer necessary.

Advantage No. 3: higher effectiveness and wide-band effect against algae

After years of research and development it has been possible to improve the active oxygen formulation thoroughly. As well as the patented algaecide active agent, Q 6/6, Soft & Easy also contains a further foam-free algaecide which acts synergistically with the Q 6/6 and thus achieves a superior active algae effect in this. Moreover, the combination of the two algaecide active agents covers a very wide algae spectrum (wide-band effect). Considering that there are about 10,000 different types of algae, this is an outstanding feature of Soft & Easy. Thus Soft & Easy is also in a way the all-round product against algae.

Advantage No. 4: lower fluctuations in the pH value

Soft & Easy is a clever system. It is itself pH-neutral but contains special substances for pH buffering which brings any large fluctuations in the pH value under control. Many people have perhaps already found out that the pH value can rapidly undergo a considerable change. Logically, this can have negative effects on the water quality. Soft & Easy is intelligent enough to intercept these peaks both upwards and downwards, and thus makes pH regulation simpler for you, and also ensures continuously impeccable water.

Advantage No. 5: an attractive price : performance ratio

What is good usually costs something, but it need not be so expensive. When the advantages of Soft & Easy are considered, the product can be seen to offer an excellent price : performance ratio. Ask your specialist supplier about it!

The application is made so simple

- ▶ Keep the pH value continuously between 7.0 and 7.4 and backwash the filter regularly - best of all before the addition of Soft & Easy.
- ▶ Both chambers of the double bag are cut open with a pair of scissors on the side marked, and the entire contents of both chambers are emptied directly into the pool in front of the inflow orifices, and with the circulating pump running. One double bag treats 20 m³ (4,400 gls).
- ▶ Incidentally: you can also see the additional clarifier effect of Soft & Easy. If when back-flushing your filter you detect perceptibly cloudy back-flush water in the inspection glass, then this is a clear indication of a more effective dirt removal.
