

## Tropical

2.5 Litres treats up to 50,000 litres

### What is it?

Lo-Chlor Tropical is an unique algaecide which will kill and control the most stubborn algae in all pools, and is our strongest algaecide manufactured to date.

### Who needs it?

- Every pool owner who has severe, resistant algae in the pool.

### What does it do?

- Tropical is effective against severe blue-green, black spot and mustard algae.

### What advantages does it have over other similar products?

- It may be used in all types of pool finishes.
- Compatible with all recognised sanitisers and other pool additives.
- Effective over a wide pH range.
- As well as lysing the algae cells, the increased detergent action (foaming) assists in releasing the clinging algae crusts from pool surfaces.

### Professional tips:

- Tropical **must not be used** in pools using an Ioniser or Natures 2.
- Do not superchlorinate for 48 hours before and after using Tropical.
- Advise pool owners that the product may smell and foam for a short period.
- Reduce pH to between 7.00 and 7.2 for best results. At lower pH the waxy coating surrounding algae cells is greatly softened and allows easier penetration by chemicals.
- Regular brushing recommended to assist in algae removal.
- Use in conjunction with Lo-Chlor Starver phosphate remover for very bad pools.
- After algae have been removed always advise your customers to follow up with regular dosing of a Lo-Chlor long life algaecide and Lo-Chlor Starver phosphate remover. This will prevent re-occurrence of algae, and also assist in helping the efficiency of other chemicals in your pool.

Use algaecides safely. Always read the label and product information before use.
